Cattle Company

SATURDAY, FEBRUARY 27, 2021

2:00 p.m. CT • Valentine (NE) Livestock Auction

POWERFUL GENETICS

Our Mission Statement:

COMBINING THE MOST DESIRABLE PHENOTYPIC AND GENOMIC TRAITS TO MEET THE PRODUCTION DEMANDS OF THE NEBRASKA SANDHILLS AND THE CONSUMER DEMANDS OF THE AMERICAN BEEF INDUSTRY.

Welcome to Bowlin Cattle Company's first public sale. We are honored to have your attention and interest in our bulls. We are working hard to make our program the best for both conformation and genomic value. We have invested in genomic EPDs for our entire cow herd as well as the yearling Angus bulls being offered. EPD values become more reliable selection tools with genomic data added in. This investment benefits both our customers and us. We feel that responsible seedstock producers need to pay attention to the end product value in order to make an impact on their customer's calf crop quality and that's why we have identified bulls who have qualified for the Top Dollar Angus program as well as the Certified Angus Beef program.

We have been selling bulls private treaty for 30 years and feel this is the best set of bulls to date.

Every year we strive to make our best better and feel we are accomplishing this goal. These bulls excel in natural thickness, structural correctness, and maternal ability, with special attention paid to foot quality.

Feel free to come out and look at the bulls anytime or give us a call and we will be glad to help you sort out which bulls would benefit your operation the most. Don Ravellette is serving as our marketing agent as he has looked through these bulls critically during our photo session and will give you his unbiased evaluation. His phone number is 605-685-5147.

Thanks to our daughters and their husbands for helping us with cattle work in all kinds of weather. The lightning storm while we were setting up AI and recip cows in 2019 when this crop of bulls was being created was quite memorable!

A special thank you to Ravenscroft Red Angus for allowing us to partner with them for this sale and for all the advice and guidance they have shared.

We look forward to seeing you at Valentine Livestock Auction at 2:00 CT on February 27, 2021 for our bull sale. Videos are available on DVAuction.com if anyone can't make it on sale day. Be sure to sign into that website ahead of time. Bulls will be in Valentine on Friday, the 26th.

Thank you.

Dale and Karen Bowlin

**SATURDAY,
FEBRUARY 27, 2021**

2:00 p.m. CT

Valentine (NE) Livestock Auction

Auctioneer:

Matt Lowery..... 308-750-6119

Marketing Agent:

Don Ravellette..... 605-685-5147

Sale Day Phones:

Valentine Livestock Auction..... 402-376-3611

Dale Bowlin 402-389-2142

Karen Bowlin..... 402-389-0205

Pre-Sale Inspection:

Bulls can be inspected at the ranch anytime; call Dale to set up a time. Bulls will be at Valentine Livestock Auction on February 26th. Lunch will be provided & served by the Bowlin & Ravenscroft families on sale day.

Absentee Bidding:

Absentee bidding is available and encouraged if you are unable to attend in person. DVAuction.com has both the video and catalog online for your convenience.

Videographer & DVAuction Consultant:

Tami Macintosh..... 308-870-3661

DVAuction
Broadcasting Real-Time Auctions

Bull Delivery:

Deduct \$100 off your total purchase if you take your bulls home on sale day. All delivery and housing of bulls will be at the risk of the buyer. Cattle will not be delivered without payment unless prior arrangements are made. Delivery will begin soon after the sale and be free within 150 miles of Cody.

First Breeding Season Guarantee:

Breeding season is defined as the 90 day period following the first turn out of the bull. If your bull is injured and unable to return to service you need to notify us as soon as possible and prior to the bull being sold for salvage. You will be given credit (minus salvage value) towards a purchase in our next sale or offered another bull if we have one available.

Breeding Soundness Guarantee:

All bulls will be evaluated by Wards Veterinary Service for breeding soundness and that information will be available on sale day.

Retaining Interest:

We are retaining a 1/3 revenue sharing semen interest in all bulls. 100% possession goes to the buyer.

Sale Order:

Ravenscroft Red Angus bulls will sell first followed immediately by the Bowlin bulls. The lot sale order will be available as a supplement sheet on sale day.

POWERFUL GENETICS

Top Dollar Angus Feeder Calf Program

Promote Your Verified Genetic Investment

Top Dollar Angus is the industry leader in third-party genetic verification and marketing assistance for superior Angus and Red Angus-based feeder cattle. Our program stamps a unique identity on the 'best of the best' by verifying and then showcasing their genetic merit. The Top Dollar Angus team works directly with a large number of feedyards and buyers to provide them with documented superior feeder cattle, coupled with genetic risk

mitigation and the precision understanding they need to pursue your cattle with absolute confidence.

Top Dollar Angus enables cow-calf producers to benefit from the genetic value already built into their herds. Producers that invest in high-end genetics, as well as strong health and nutrition programs, need a means of positively differentiating their calves from average cattle. Top Dollar Angus does that. Industry demand is strong for genetically superior feeder calves with the right supporting documentation. Don't make buyers guess, let them know by putting the Top Dollar Angus badge of honor on your premium genetic investment.

Contact our team for more information and a free evaluation.

Dollar value indexes, or **\$Values**, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

American Angus Association \$Value Indexes

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase pre-weaning growth through additional weaning weight and maternal milk with expenses adjustment for mature size and maternal milk.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.

This ET beast was an early standout last summer & has not quit. If you're looking for a high-performing Payweight, you've found him plus he's super docile.

Watch & bid online for FREE at

DVAuction
Broadcasting Real-Time Auctions

Can't make the sale? Bid from home with DVAuction's "real-time" internet bidding service!

Buying online is as easy as 1, 2, 3...

1. Create an account at www.dvauction.com under the "register" tab
2. Apply for bidding approval by clicking on the "details" tab at least 24 hours prior to the auction-a DV representative will notify you once you have been approved
3. Tune in for the sale and make your purchases!

After the sale, contact the sale manager or owner to arrange transportation and payment. **High speed internet** is required for successful bidding-be sure to check the lag-time monitor in the top left corner to ensure real-time broadcasts.

Proxy Bidding-if you can't make time to watch the sale, register a proxy bid and let our system represent your bid while you're away. Look for the "proxy bid" tab on the auction listing, and fill in your maximum bids. We'll handle the rest!

Having troubles? During the auction, you can type a message to the operator at any time for assistance. Our full-time support team can also always be reached at (402) 474-5557.

Good calving ease, docility, and milk EPDs combine in this attractive bull that goes back to Final Answer and Resource. Safe for large-framed heifers. Top 10% for Milk, \$EN. Top 35% for CED, DOC.

S A V FINAL ANSWER 0035

AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. **Accuracy (ACC)**, is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted whether the animal has a genotype and the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is more favorable.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

MANAGEMENT

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

Claw Set (Claw), is expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes.

Foot Angle (Angle), is expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth.

Pulmonary arterial pressure EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high-altitude disease most commonly experienced at 5,500 ft or greater in elevation.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, reported in dollars per head, are multi-trait economic selection indexes where a higher values suggest more profit when comparing two individuals.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with current production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning.

Cow Energy Value (\$EW), is expressed in dollar savings per cow each year due to lower cow maintenance energy requirements (due to lactation and body size) with a larger number being more favorable.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle and sell on a carcass weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Hot Value (\$H), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), an index, expressed in dollars per head, includes all traits that make up both \$M and \$H with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining calf heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

*If then you were raised with Christ,
seek those things which are above,
where Christ is,
sitting at the right hand of God.
Set your mind on things above,
not on things on the earth.*

COLOSSIANS 3:1-2 NKJV
